SPINNING®

What is Spinning®? Spinning® is a heart rate training program for new riders and serious athletes alike. The goal in Spinning® is to build a strong aerobic foundation and help each individual reach his or her fitness goal by utilizing the Energy Zones described below. New participants should ride ENDURANCE classes for their first 2 months of Spinning® to develop a strong base. From this base, riders may vary their training intensities using all of the Energy Zones.

ENDURANCE

The Endurance Energy Zone uses an even exertion of energy for a sustained period, with the heart rate range between 65% and 75%. The Endurance Energy Zone trains the body to be more efficient at metabolizing fat and maintaining a consistent pace for extended periods of time. This is the best class for overall fitness and aerobic base building.

STRENGTH

The Strength Energy Zone involves a heart rate training intensity of 75% to 85% to build power and speed. This type of training promotes muscular and cardiovascular development.

INTERVAL

The Interval Energy Zone emphasizes speed, timing, tempo, and rhythm with a heart rate training range of 65% to 92%. The Interval class emphasizes effort as well as recovery.

RACE DAY

The Race Day Energy Zone demands peak performance. This is a sustained challenge with heart rates between 80% and 92%. This class is a mental and physical challenge. The participant strives for peak performance. This class should not be attempted until at least 2-3 months of aerobic base building has been successfully completed.

TRAINING DAY

The Training Day Energy Zone allows you to work within the heart rate parameters of your choice.
